

- After pulling the machine out of the table cabinet, press the 'On/Off' button in the lower right corner. It is always a good precaution to reset the machine before beginning any stretch of games, to avoid Internet connection problems. To do this, unplug the ethernet and power cord from underneath and behind the console and then replug them both back in. Give it a few minutes to reboot itself and it will come back to the start screen.

- Touch the screen to go to the login page and the username 'alltel' will already be there so you just enter the password : '12345' (without the apostrophes) ... when entering it, touch the numbers one at a time to ensure that you get them all in because sometimes the touch screen moves slower than its inputter and it will not pick up each of them.

- After logging in, you will be presented with the league and team options page to set up the game sheet. Select from the drop down menu the respective league and teams of your game play. For the referees and scorekeeper options, you only need to log in one of the options such as 'Default Linesman' and 'Default Scorekeeper' to begin the game because the refs and scorekeepers running the games will probably not be registered in the system.

- Once you progress through the game specifics, you will be at the roster page for the Home Team (first). Check whichever goaltender is in net, then move to the right side of the screen and hit 'Select All' to check all the players of the team. Once at least one goaltender and the players are selected, you may move on to the Visiting Team's roster page. Do the same thing and you will be ready to start the game.

- Basic operation buttons are on the left and right side of the console, respectively. Shots on goal are tallied with the push of the button, or can be edited by double tapping the number tallied on the screen next to the team names. To edit goals or penalties, just double or triple tap (depending on how slow/fast you tap) and the penalty/goal will open up and you can edit or delete the stat. All other operations are pretty easy to figure out, just select carefully from the drop down menus presented to you and remember to be patient when entering numbers because the computer is sometimes slower than the fingers that input the game statistics.
